Progressive Web App

Performance

Accessibility

Best Practices

## Progressive Web App

These checks validate the aspects of a Progressive Web App, as specified by the baseline [PWA Checklist](#).

### 8 Failed Audits

#### ▼ Does not register a service worker

✗

The service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. [Learn more](#).

#### ▼ Does not respond with a 200 when offline

✗

If you're building a Progressive Web App, consider using a service worker so that your app can work offline. [Learn more](#).

#### ▼ Does not use HTTPS: 126 insecure requests found

✗

All sites should be protected with HTTPS, even ones that don't handle sensitive data.

HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. [Learn more](#).

#### ▼ Insecure URLs:

▼ Does not redirect HTTP traffic to HTTPS ✖

If you've already set up HTTPS, make sure that you redirect all HTTP traffic to HTTPS.

[Learn more.](#)

▼ Page load is not fast enough on 3G ✖

A fast page load over a 3G network ensures a good mobile user experience. [Learn more.](#)

First Interactive was at 17,930 ms. More details in the "Performance" section.

▼ User will not be prompted to Install the Web App ✖

Browsers can proactively prompt users to add your app to their homescreen, which can lead to higher engagement. [Learn more.](#)

Failures: No manifest was fetched, Site does not register a service worker, Service worker does not successfully serve the manifest's start\_url.

X

▼ Is not configured for a custom splash screen

A default splash screen will be constructed for your app, but satisfying these requirements guarantee a high-quality [splash screen](#) that transitions the user from tapping the home screen icon to your app's first paint

Failures: No manifest was fetched.

X

▼ Address bar does not match brand colors

The browser address bar can be themed to match your site. [Learn more](#).

Failures: No manifest was fetched, No `<meta name="theme-color">` tag found.

▼ 3 Passed Audits

✓

▼ Contains some content when JavaScript is not available

Your app should display some content when JavaScript is disabled, even if it's just a warning to the user that JavaScript is required to use the app. [Learn more](#).

✓

▼ Has a `<meta name="viewport">` tag with `width` or `initial-scale`

Add a viewport meta tag to optimize your app for mobile screens. [Learn more](#).

✓

▼ Content is sized correctly for the viewport

If the width of your app's content doesn't match the width of the viewport, your app might not be optimized for mobile screens. [Learn more](#).

▼ Manual checks to verify

These checks are required by the baseline [PWA Checklist](#) but are not automatically checked by Lighthouse. They do not affect your score but it's important that you verify them manually.

▼ Site works cross-browser

To reach the most number of users, sites should work across every major browser. [Learn more](#).

▼ Page transitions don't feel like they block on the network

Transitions should feel snappy as you tap around, even on a slow network, a key to perceived performance. [Learn more](#).

▼ Each page has a URL

Ensure individual pages are deep linkable via the URLs and that URLs are unique for the purpose of shareability on social media. [Learn more](#).

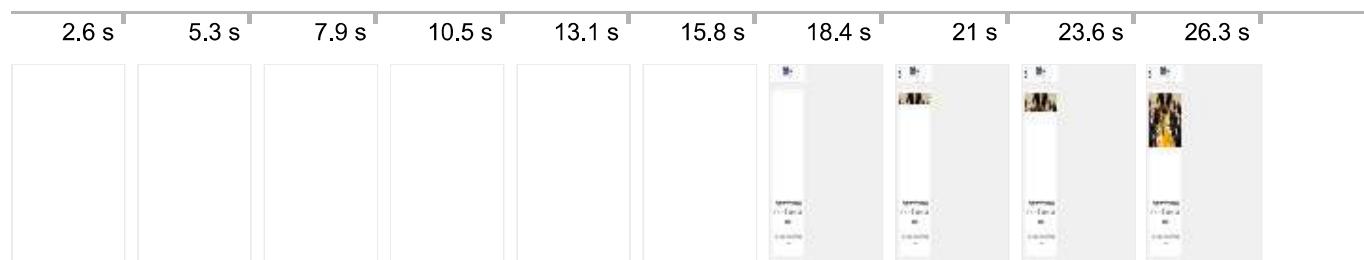

13

## Performance

These encapsulate your app's current performance and opportunities to improve it.

### Metrics

These metrics encapsulate your app's performance across a number of dimensions.

▼ First meaningful paint

17,930 ms

First meaningful paint measures when the primary content of a page is visible. [Learn more.](#)

▼ First Interactive (beta) 17,930 ms

First Interactive marks the time at which the page is minimally interactive. [Learn more.](#)

▼ Consistently Interactive (beta)

Consistently Interactive marks the time at which the page is fully interactive. [Learn more.](#)

Audit error: Network activity continued through the end of the trace recording. Consistently Interactive requires a minimum of 5 seconds of both main thread idle and network idle.

▼ Perceptual Speed Index: 21,189 3

Speed Index shows how quickly the contents of a page are visibly populated. [Learn more.](#)

▼ Estimated Input Latency: 16 ms 100

The score above is an estimate of how long your app takes to respond to user input, in milliseconds. There is a 90% probability that a user encounters this amount of latency, or less. 10% of the time a user can expect additional latency. If your score is higher than Lighthouse's target score, users may perceive your app as laggy. [Learn more.](#)

## Opportunities

These are opportunities to speed up your application by optimizing the following resources.

▼ Serve images as WebP

4,500 ms  
830 KB

WebP provides better lossy and lossless compression than PNG or JPEG, which means faster downloads and less data consumption. [Learn more.](#)

▼ Uses an excessive DOM size: 2,318 nodes

93

Browser engineers recommend pages contain fewer than ~1,500 DOM nodes. The sweet spot is a tree depth < 32 elements and fewer than 60 children/parent element. A large DOM can increase memory usage, cause longer [style calculations](#), and produce costly [layout reflows](#). [Learn more](#).

▼ View details

Total DOM Nodes	DOM Depth	Maximum Children
2,318	17	53
target: < 1,500 nodes	target: < 32	target: < 60 nodes

▼ Critical Request Chains: 40

The Critical Request Chains below show you what resources are required for first render of this page. Improve load by reducing the length of chains, reducing the download size of resources, or deferring the download unnecessary resources. [Learn more](#).

Longest chain: **24,060.2ms** over 2 requests, totalling **69.52 KB**

## ▼ 5 Passed Audits

### ▼ Properly size images

Serve images that are appropriately-sized to save cellular data and improve load time.

[Learn more.](#)

### ▼ Offscreen images

Consider lazy-loading offscreen images to improve page load speed and time to interactive.

[Learn more.](#)

### ▼ Avoids page redirects: 0 ms

Redirects introduce additional delays before the page can be loaded. [Learn more.](#)

### ▼ User Timing marks and measures: 0

Consider instrumenting your app with the User Timing API to create custom, real-world measurements of key user experiences. [Learn more.](#)

### ▼ JavaScript boot-up time is high (> 4s): 1,460 ms

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this.

## Accessibility

These checks highlight opportunities to [improve the accessibility of your app.](#)

0

## Elements Use Attributes Correctly

These are opportunities to improve the configuration of your HTML elements.

- ▼ [accesskey] values are not unique.

X

Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ **<audio>** elements are missing a **<track>** element with [kind="captions"].

X

Captions make audio elements usable for deaf or hearing-impaired users, providing critical information such as who is talking, what they're saying, and other non-speech information. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ Image elements do not have [alt] attributes.

X

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ <input type="image"> elements do not have [alt] text.

X

When an image is being used as an `<input>` button, providing alternative text can help screen reader users understand the purpose of the button. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ Some elements have a [tabindex] value greater than 0.

X

A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies.

[Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ Cells in a <table> element that use the [headers] attribute refers to other cells of that same table.

X

Screen readers have features to make navigating tables easier. Ensuring `<td>` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ <th> elements and elements with [role="columnheader"/"rowheader"] do not have data cells they describe.

X

Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users.

[Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

## ARIA Attributes Follow Best Practices

These are opportunities to improve the usage of ARIA in your application which may enhance the experience for users of assistive technology, like a screen reader.

▼ [aria-\*] attributes do not match their roles.

X

Each ARIA `role` supports a specific subset of `aria-\*` attributes. Mismatching these invalidates the `aria-\*` attributes. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ [role]s do not have all required [aria-\*] attributes.

X

Some ARIA roles have required attributes that describe the state of the element to screen readers. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ Elements with [role] that require specific children [role]s, are missing. X

Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ [role]s are not contained by their required parent element. X

Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ [role] values are not valid. X

ARIA roles must have valid values in order to perform their intended accessibility functions. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ [aria-\*] attributes do not have valid values. X

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ [aria-\*] attributes are not valid or misspelled. X

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

## Elements Have Discernable Names

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

- ▼ Buttons do not have an accessible name. X

When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ Links do not have a discernable name. X

Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

## Elements Describe Contents Well

These are opportunities to make your content easier to understand for a user of assistive technology, like a screen reader.

- ▼ The page does not contain a heading, skip link, or landmark region. X

Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ Document does not have a <title> element. X

Screen reader users use page titles to get an overview of the contents of the page. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ <frame> or <iframe> elements do not have a title. X

Screen reader users rely on frame titles to describe the contents of frames. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ Form elements do not have associated labels. X

Labels ensure that form controls are announced properly by assistive technologies, like screen readers. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ Presentational <table> elements do not avoid using <th>, <caption> or the [summary] attribute. X

A table being used for layout purposes should not include data elements, such as the th or caption elements or the summary attribute, because this can create a confusing experience for screen reader users. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ <object> elements do not have [alt] text. X

Screen readers cannot translate non-text content. Adding alt text to `<object>` elements helps screen readers convey meaning to users. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ <video> elements do not contain a <track> element with [kind="captions"]. X

When a video provides a caption it is easier for deaf and hearing impaired users to access its information. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

▼ <video> elements do not contain a <track> element with [kind="description"]. X

Audio descriptions provide relevant information for videos that dialogue cannot, such as facial expressions and scenes. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

## Color Contrast Is Satisfactory

These are opportunities to improve the legibility of your content.

▼ Background and foreground colors do not have a sufficient contrast ratio. X

Low-contrast text is difficult or impossible for many users to read. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

## Elements Are Well Structured

These are opportunities to make sure your HTML is appropriately structured.

- ▼ <dl>'s do not contain only properly-ordered <dt> and <dd> groups, <script> or <template> elements. ✖

When definition lists are not properly marked up, screen readers may produce confusing or inaccurate output. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ Definition list items are not wrapped in <dl> elements. ✖

Definition list items ('<dt>' and '<dd>') must be wrapped in a parent `<dl>` element to ensure that screen readers can properly announce them. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ [id] attributes on the page are not unique. ✖

The value of an id attribute must be unique to prevent other instances from being overlooked by assistive technologies. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ Lists do not contain only <li> elements and script supporting elements (<script> and <template>). ✖

Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ List items (<li>) are not contained within <ul> or <ol> parent elements. ✖

Screen readers require list items ('<li>') to be contained within a parent `<ul>` or `<ol>` to be announced properly. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

## Page Specifies Valid Language

These are opportunities to improve the interpretation of your content by users in different locales.

- ▼ <html> element does not have a [lang] attribute. ✖

If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might not announce the page's text correctly. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ <html> element does not have a valid value for its [lang] attribute. ✖

Specifying a valid [BCP 47 language](#) helps screen readers announce text properly. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ [lang] attributes do not have a valid value. ✖

Specifying a valid [BCP 47 language](#) on elements helps ensure that text is pronounced correctly by a screen reader. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

## Meta Tags Used Properly

These are opportunities to improve the user experience of your site.

- ▼ The document uses <meta http-equiv="refresh">.

X

Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. This may create a frustrating or confusing experience. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

- ▼ [user-scalable="no"] is used in the <meta name="viewport"> element or the [maximum-scale] attribute is less than 5.

X

Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. [Learn more](#).

Audit error: Required Accessibility gatherer encountered an error: Failed to execute 'querySelectorAll' on 'Document': 'font-size:' is not a valid selector.

## Best Practices

We've compiled some recommendations for modernizing your web app and avoiding performance pitfalls.

50

### 8 Failed Audits

- ▼ Does not use HTTPS: 126 insecure requests found

X

All sites should be protected with HTTPS, even ones that don't handle sensitive data.

HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. [Learn more](#).

- ▼ Insecure URLs:

▼ 8 Passed Audits

**Avoids Application Cache**

Application Cache is deprecated. [Learn more.](#)

**▼ Avoids WebSQL DB**

Web SQL is deprecated. Consider using IndexedDB instead. [Learn more.](#)

**▼ Avoids Mutation Events in its own scripts**

Mutation Events are deprecated and harm performance. Consider using Mutation Observers instead. [Learn more.](#)

**▼ Avoids document.write()**

For users on slow connections, external scripts dynamically injected via `document.write()` can delay page load by tens of seconds. [Learn more.](#)

**▼ Avoids requesting the geolocation permission on page load**

Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to user gestures instead. [Learn more.](#)

**▼ Avoids requesting the notification permission on page load**

Users are mistrustful of or confused by sites that request to send notifications without context. Consider tying the request to user gestures instead. [Learn more.](#)

**▼ Avoids deprecated APIs**

Deprecated APIs will eventually be removed from the browser. [Learn more.](#)

**▼ Allows users to paste into password fields**

Preventing password pasting undermines good security policy. [Learn more.](#)
